Profile

Senior Frontend Engineer with 10+ years of experience, primarily in Angular and enterprise-scale products. Recent hands-on work in React and Next.js - built TeamPulse, a full-stack multi-tenant SaaS, to cover real production concerns. Background in UI architecture, incremental modernization, shared component platforms, and contract-based reliability.

Professional Experience

2015 – Present

Armedia

Senior Frontend Engineer

- Introduced a Web Components strategy to replace AngularJS modules incrementally, without a stop-the-world rewrite.
- Built and maintained shared UI libraries in a monorepo; automated versioning and publishing to Nexus.
- Implemented Storybook as a development and documentation platform for shared components and web components.
- Improved rendering performance by ~30% through change detection optimization, memoized pipes, and lazy-loading.
- Introduced contract testing (Pact) and API mocking (Prism) to improve integration reliability and unblock frontend from backend timelines.
- Defined ESLint rules and coding standards, reducing code review rework.
- Mentored junior and mid-level developers; contributed to architectural decisions and engineering strategy

2018 – 2019

The Big Search (Tomato Talent)

Frontend Developer

- Developed Angular UI components and delivered UX-driven interfaces.
- Established Angular project architecture, structure, and coding standards.
- Implemented CI/CD pipelines in Bitbucket, reducing deployment time by ~60%.
- Collaborated closely with backend teams to optimize REST API integration.
- Performed code reviews and improved consistency across engineering workflows.
- Helped resolve team blockers and enhance development efficiency.

Education

2010 – 2015

Bachelor

Faculty of Computer Science & Engineering

Java SE7 Fundamentals & Programming

Semos Education

Skills & Technologies

Frontend Frameworks

Angular, AngularJS, RxJS, Web Components, React, Next.js, MDXVitest, TanStack Query, Zustand, NextAuth, Drizzle ORM, Tailwind CSS

Tools & DevOps

Git CI/CD Bitbucket Pipelines
npm Lerna ESLint

Testing

Jest Jasmine Karma Pact (contract testing) Prism (API mocking)

UI & Styling

HTML5 CSS3 SCSS Responsive Design

Languages

TypeScript JavaScript Java (support-level)

Backend (Support)

Spring Boot MySQL REST APIs

Project Portfolio

TeamPulse (Next.js 15 / React 19 / TypeScript)

Full-stack multi-tenant SaaS dashboard built end-to-end.

- Multi-tenant auth with NextAuth v5, JWT sessions, and edge-level middleware guards.
- Role-based access enforced at middleware, server action, and UI layers.
- Real-time activity feed via SSE with no external real-time service.
- Intercepting routes + parallel routes for a modal-first UX with shareable direct URLs.
- Server Components + Server Actions with two-layer Zod validation (client + server).
- Infinite scroll pagination and optimistic UI with TanStack Query v5.
- Demo: teampulse-ecru-sigma.vercel.app  | GitHub: github.com/bmickoski/teampulse 

Formly Form Builder

Production-oriented visual builder with a strict domain model and renderer-aware Formly export.

- Left panel: draggable palette (fields + layout).
- Center panel: placeholder canvas with nested layout editing.
- Right panel: inspector for props, validators, and layout controls.
- Preview: real Formly render (Material or Bootstrap).
- Default preview renderer: Bootstrap.
- Demo: <https://bmickoski.github.io/formly-form-builder/> 
- GitHub: <https://github.com/bmickoski/formly-form-builder> 

Personal Portfolio (React / Next.js)

- Built a case-study driven portfolio to showcase architecture decisions, tradeoffs, and outcomes.
- Implemented an MDX content pipeline, dark mode, and SEO/OpenGraph metadata for shareable previews.
- Added an interactive case study rotator to keep the homepage concise while showing breadth.

React Entity Picker Lab (React / TypeScript)

- Single and multi-select with keyboard-first accessibility (ARIA, focus management).
- Virtualization for 10,000+ items without performance degradation.
- Abortable async search with debouncing and request cancellation.
- Route-driven state hydration with localStorage persistence and rehydration cache.
